

WHOLE GOVERNMENT GOING DOWN

USPS Account Compromise -- Evidence Record

August 7, 2026

Quincey K. Lee -- NFT Las Vegas Ltd.

What Happened

On August 7, 2026, while attempting to create a PO Box at USPS for secure mail delivery, Quincey K. Lee discovered that her USPS.com account's multi-factor authentication (MFA) recovery email had been changed to QQ@Quincey.ai -- an email address she never created and does not recognize.

Her legitimate email addresses on the Quincey.ai domain are:

- Quincey@Quincey.ai (primary, FastMail username)
- Q@Quincey.ai (alias)
- *@Quincey.ai (catch-all alias -- receives ALL mail to any @Quincey.ai address)

QQ@Quincey.ai is NOT a configured alias or address. Someone with unauthorized access to the USPS account changed the MFA recovery email to this address.

CRITICAL DETAIL: Because FastMail has a catch-all (*@quincey.ai) configured, emails sent to QQ@Quincey.ai actually arrive in Quincey's inbox. The attacker likely does not know this -- they may have intended QQ@Quincey.ai to be a mailbox they control, not realizing the catch-all intercepts it.

This means:

1. Someone has or had access to Quincey's USPS.com credentials
2. They logged into the USPS account
3. They changed the MFA recovery email
4. USPS sent a notification of this change to Quincey's actual email
5. The change was discovered during PO Box setup on August 7, 2026

Context -- Why This Matters

The PO Box was being created specifically to protect a client's mail. The client reported:

- 3 credit cards ordered via USPS mail -- never arrived
- 1 check expected via USPS mail -- never arrived
- Packages stolen at the client's apartment

Quincey herself previously received a package in a LOCKED USPS mailbox that was torn open and completely empty. The contents were removed from inside a locked federal mailbox.

The PO Box was intended to:

1. Provide a secure delivery address for the client's credit cards and packages

2. Allow Quincey to monitor mail delivery via in-store USPS security cameras

During the PO Box setup process, the USPS website's MFA screen revealed that the recovery email had been changed to QQ@Quincey.ai -- exposing that someone had already compromised the USPS account.

This incident occurs in the context of a documented 4+ year pattern of cyberstalking and network targeting against Quincey, including a proven Wi-Fi deauthentication attack with spoofed MAC addresses discovered on August 5-7, 2026 (documented separately in the FBI cyber crime complaint and at killuminati.nftlasvegas.io).

Applicable Federal Law

18 U.S.C. 1708 -- Theft or Receipt of Stolen Mail

The client's 3 credit cards and check were sent via USPS and never arrived.

18 U.S.C. 1702 -- Obstruction of Correspondence

A package in a LOCKED USPS mailbox was opened and emptied.

18 U.S.C. 1028 -- Fraud and Related Activity in Connection with Identification

Unauthorized change of USPS account recovery email constitutes identity-related fraud.

18 U.S.C. 1030 -- Computer Fraud and Abuse Act (CFAA)

Unauthorized access to the USPS.com account to change MFA settings.

18 U.S.C. 2261A -- Stalking

Pattern of conduct (network attacks, mail tampering, account compromise) directed at a specific individual over 4+ years.

EXHIBIT A -- USPS MFA Screen Showing QQ@Quincey.ai

Screenshot captured August 7, 2026 at approximately 10:56 PM PDT

Source: verified.usps.com MFA selection screen during PO Box setup

[IMAGE NOT FOUND: /Users/nftlasvegas/Desktop/Screenshot 2026-08-07 at 10.56.00 PM.png]

KEY EVIDENCE:

The MFA screen shows three recovery options:

1. SMS
2. Authenticator App (currently selected)
3. Send Email QQ@Quincey.ai <-- UNAUTHORIZED

QQ@Quincey.ai was NOT configured by the account holder. This is the attacker's chosen recovery email, set after gaining access to the USPS account.

EXHIBIT B -- FastMail Address Configuration

Screenshot captured August 7, 2026 at approximately 10:56 PM PDT

Source: app.fastmail.com -- My email addresses settings panel

[IMAGE NOT FOUND: /Users/nftlasvegas/Desktop/Screenshot 2026-08-07 at 10.56.49 PM.png]

KEY EVIDENCE:

The FastMail settings show exactly three configured addresses:

1. *@quincey.ai -- Catch-all alias (receives ALL mail to any @quincey.ai address)
2. q@quincey.ai -- Alias
3. quincey@quincey.ai -- Username (primary login)

QQ@Quincey.ai is NOT listed as a configured address or alias. It does not exist as a separate mailbox. However, because of the catch-all (*@quincey.ai), any email sent to QQ@Quincey.ai will be delivered to Quincey's inbox.

This proves:

1. QQ@Quincey.ai was NOT created by the account holder
2. The attacker likely intended it as a separate recovery email they control
3. The catch-all unexpectedly delivers those recovery emails to the real owner
4. The attacker may not know the catch-all exists

Summary of Evidence

1. USPS.com account MFA recovery email was changed to QQ@Quincey.ai without the account holder's knowledge or authorization.
2. QQ@Quincey.ai is not a legitimate email address created by the account holder. FastMail settings confirm only three addresses: *@quincey.ai (catch-all), q@quincey.ai (alias), and quincey@quincey.ai (username).
3. The account holder's client has reported 3 missing credit cards and 1 missing check sent via USPS mail.
4. The account holder previously received a package in a LOCKED USPS mailbox that was torn open and emptied.
5. This incident is part of a documented 4+ year pattern of cyberstalking, network intrusion, and unauthorized access targeting the account holder.
6. A separate FBI cyber crime complaint documenting a Wi-Fi deauthentication attack with proven MAC spoofing has been filed (August 7, 2026).
7. LVMPD was contacted by phone regarding these incidents. The call was disconnected by the dispatcher before a report could be filed.
